MAKE SMARTER PROTOTYPES.
MAKE REAL APPS.

P2UX

P2UX is a web-based application design platform.
Use it to create multi-platform apps that run natively.

With P2UX developers and designers seamlessly collaborate
to build functional prototypes that become real apps.

Visual Design Editor
Support for different devices and platforms, with per device and platform design customization. Comes packed with easy-to-use components, events, actions, and transitions.

Bind Design UI to Dynamic Data
Integrate live data and business logic into projects. Features customizable conditional events and actions. Modify data using conditional logic and expressions.

Publish Prototypes
View apps on their respective devices and platforms for usability testing and feedback. Share these prototypes with other members of your team or view them privately. Test your application ideas with users and iterate quickly.

Developer Tools
P2UX designs integrate with existing platform development tools for easy customization. Let developers focus on the parts of your application that matter rather than spending time coding general UI and application flow.

Create your apps using Builder, a design-friendly online tool.

Test your apps using Player, right on your smartphone.

Publish your apps to the store, ready for users to download.
